

`pip._vendor.distlib.util.
Sequencer.remove_node`

`pip._internal.operations.build.build
_tracker.BuildTracker.track`

`remove`

```
graph LR; A["pip._vendor.distlib.util.  
Sequencer.remove_node"] --> C[remove]; B["pip._internal.operations.build.build  
_tracker.BuildTracker.track"] --> C; C --> C;
```

The diagram illustrates a flow where two different source functions point to a common target node labeled 'remove'. The first source is `pip._vendor.distlib.util.Sequencer.remove_node` and the second is `pip._internal.operations.build.build_tracker.BuildTracker.track`. Both have blue arrows pointing to the 'remove' node. The 'remove' node is a grey rectangle and features a blue curved arrow pointing back to itself, indicating a self-loop or recursive call.
