release

```
graph LR; A["pip._vendor.packaging.version.  
Version.base_version"] --> D[release]; B["pip._vendor.packaging.version.  
Version.major"] --> D; C["pip._vendor.packaging.version.  
Version.micro"] --> D; E["pip._vendor.packaging.version.  
Version.minor"] --> D;
```

The diagram illustrates the components of a version string that contribute to a release. On the left, four white rectangular boxes are stacked vertically, each containing a string from the `pip._vendor.packaging.version` module. These strings are `Version.base_version`, `Version.major`, `Version.micro`, and `Version.minor`. On the right, there is a gray rectangular box labeled `release`. Four blue arrows originate from the right side of each of the four white boxes and point towards the `release` box, indicating that these version components are used to determine the final release string.
