

pip._vendor.requests.structures.
CaseInsensitiveDict.__repr__

pip._vendor.pyparsing.results.
ParseResults.as_dict

pip._vendor.pyparsing.results.
ParseResults.dump

items

```
graph LR; A["pip._vendor.requests.structures.  
CaseInsensitiveDict.__repr__"] --> D["items"]; B["pip._vendor.pyparsing.results.  
ParseResults.as_dict"] --> D; C["pip._vendor.pyparsing.results.  
ParseResults.dump"] --> D;
```

The diagram illustrates three different functions or methods that all point to a common output labeled 'items'. The functions are arranged vertically on the left, and blue arrows point from each of them to the 'items' box on the right. The first function is from the requests module, the second and third are from the pyparsing module.
