

pip.\_vendor.packaging.version.  
Version.is\_devrelease

pip.\_vendor.packaging.version.  
Version.is\_prerelease

dev

```
graph LR; A["pip._vendor.packaging.version.  
Version.is_devrelease"] --> D["dev"]; B["pip._vendor.packaging.version.  
Version.is_prerelease"] --> D;
```

The diagram illustrates a logic flow where two version-related attributes from the `pip._vendor.packaging.version` module are used to determine if a version is a development release. The top box contains `Version.is_devrelease`, and the bottom box contains `Version.is_prerelease`. Both boxes have blue arrows pointing to a gray box on the right labeled `dev`, indicating that either condition can result in a development release status.
