

pip._vendor.rich._win32
_console.LegacyWindowsTerm.erase
_end_of_line

pip._vendor.rich._win32
_console.LegacyWindowsTerm.erase_line

pip._vendor.rich._win32
_console.LegacyWindowsTerm.erase
_start_of_line

FillConsoleOutputAttribute

```
graph LR; A["pip._vendor.rich._win32  
_console.LegacyWindowsTerm.erase  
_end_of_line"] --> D["FillConsoleOutputAttribute"]; B["pip._vendor.rich._win32  
_console.LegacyWindowsTerm.erase_line"] --> D; C["pip._vendor.rich._win32  
_console.LegacyWindowsTerm.erase  
_start_of_line"] --> D;
```

The diagram illustrates a mapping from three specific Windows console API functions to a single, more general attribute. Three white rectangular boxes on the left, each containing a module path and a function name, have blue arrows pointing to a single gray rectangular box on the right. The functions are `erase_end_of_line`, `erase_line`, and `erase_start_of_line`, all from the `LegacyWindowsTerm` class in the `rich._win32` module. These functions are mapped to the `FillConsoleOutputAttribute` attribute.
