

pip.\_vendor.typing  
\_extensions.TypeAliasType.\_\_or\_\_

pip.\_vendor.typing  
\_extensions.TypeAliasType.  
\_\_ror\_\_

\_is\_unionable

```
graph LR; A["pip._vendor.typing  
_extensions.TypeAliasType.__or__"] --> C["_is_unionable"]; B["pip._vendor.typing  
_extensions.TypeAliasType.  
__ror__"] --> C;
```

The diagram illustrates a relationship between two methods and a common target. On the left, there are two white rectangular boxes. The top box contains the text 'pip.\_vendor.typing' followed by '\_extensions.TypeAliasType.\_\_or\_\_'. The bottom box contains 'pip.\_vendor.typing' followed by '\_extensions.TypeAliasType.' and then '\_\_ror\_\_' on a new line. On the right, there is a gray rectangular box containing the text '\_is\_unionable'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both methods point to the '\_is\_unionable' attribute.
