

charset\_name

get\_confidence

is\_likely\_utf32le

```
graph LR; A[charset_name] --> C[is_likely_utf32le]; B[get_confidence] --> C;
```

The diagram illustrates a logical flow where two separate inputs, 'charset\_name' and 'get\_confidence', are combined to determine the output 'is\_likely\_utf32le'. The inputs are shown in white boxes on the left, and the output is shown in a gray box on the right. Blue arrows indicate the direction of the flow from each input to the output.
